| Non-Hispanic White | 1366.3 | 1304.3 | 1258.7 |

Total fertility - Age adjusted rate per 1,000 births that a hypothetical group of 1,000 women would have over their lifetimes
It is calculated by adding age-specific birth rates for the age groups 10-14, 15-19, 20-24, 25-29, 30-34, 35-39, 40-44, and 45-49
Source: Illinois Department of Public Health(IDPH), Division of Vital Records, Birth Certificate Data Files, 2018 - 2020; US Cen

if they were to pass through their childbearing years experiencing the same age-specific birth rate.
